

Name: __Rameasa Arna_____

Lesson 3: Working with Lists

1. Create a list of 5 of your favorite tv shows.

```
tv = ["you", "riverdale", "thirteen reason why", "the worst witch",  
"emily in paris"]
```

2. Print the list in its original order.

```
print(tv)
```

3. Use the sorted() function to print the list in alphabetical order. How is sorted() different from sort()?

```
print(sorted(tv))
```

sort() change the list permanently but sorted() does it temporarily.

4. Print out your original list.

```
print(tv)
```

5. Used sorted() to print your list in reverse alphabetical order.

```
print(sorted(tv, reverse = True))
```

6. Create a message indicating how many favorite TV shows you have – use the len() function.

```
message = print("i have " ,len(tv) , "favourite tv shows")
```
